

# SQL Task 1

- Software used: MySQL workbench
- Create a new database name as library\_db

```
Create database library_db ;  
  
Use library_db ;
```

- Create a table name as employees

```
CREATE TABLE employees (  
    emp_id INT,  
    emp_name VARCHAR(20),  
    position VARCHAR(20),  
    Salary INT,  
    branch_id INT PRIMARY KEY  
);
```

- Create another table as branch

```
CREATE TABLE branch (  
    manager_id INT,  
    branch_address VARCHAR(250),  
    contact_no NUMERIC,  
    branch_id INT,  
    FOREIGN KEY (branch_id)  
        REFERENCES employees (branch_id)  
);
```

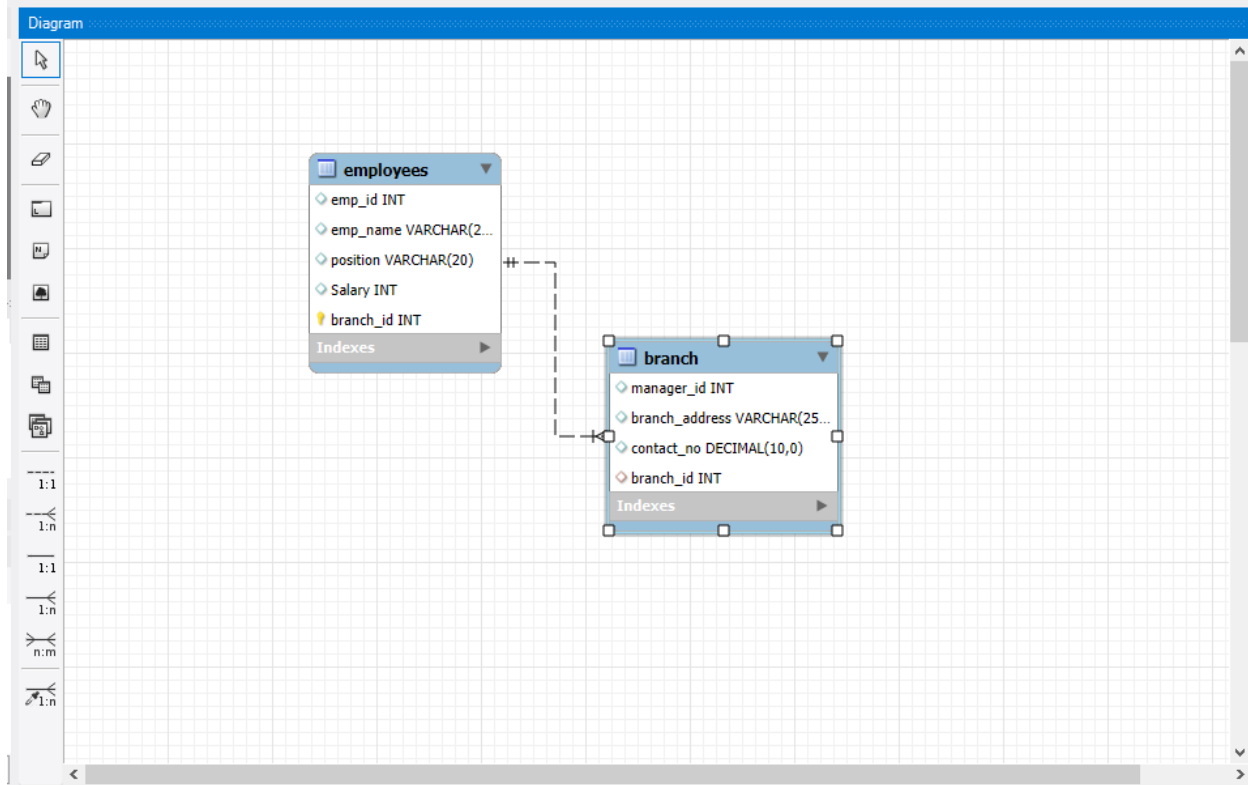

- Primary key in the given tables

```
branch_id INT PRIMARY KEY
```

- Foreign key in the given tables

```
branch_id INT,  
FOREIGN KEY (branch_id)  
    REFERENCES employees (branch_id)
```

- ER Diagram for the given tables

- Schema

```

Create database library_db ;

• Use library_db ;

• CREATE TABLE employees (
    emp_id INT,
    emp_name VARCHAR(20),
    position VARCHAR(20),
    Salary INT,
    branch_id INT PRIMARY KEY
);

• CREATE TABLE branch (
    manager_id INT,
    branch_address VARCHAR(250),
    contact_no NUMERIC,
    branch_id INT,
    FOREIGN KEY (branch_id)
        REFERENCES employees (branch_id)
);

```
